

Delta RESIN TRAPS

KEEP COSTLY MEDIA IN PLACE.

Delta Screens resin traps feature a continuous slot design that prevents the loss of ion exchange resin, activated carbon media, filter media, greensand media, sand and other media. Not only is this essential to prevent the loss of expensive material, but its also critical to avoid damaging downstream equipment.

However, this safety precaution will not diminish flow. Delta Screens can manufacture resin traps to guard against your exact media particle size while also providing the flow rate your system requires.

Reliable, durable and extremely low maintenance, the non-clogging continuous slot design allows for a large amount of open area with extremely consistent spacing. Delta Screens can manufacture resin traps in a wide variety of materials and sizes to suit your application needs.
