

Delta SCALLOP Screens

SUPERIOR STRENGTH AND PERFORMANCE.

Delta Screens scallops are an effective alternative to a single outer basket in many radial flow systems. Particularly useful in tall vessels, Delta scallops are precision welded to provide maximum strength and prevent buckling under even the heaviest load.

With a larger open area, Delta scallops offer a more consistent and efficient inlet flow for greater overall system performance. A narrow, continuous slot design and v-shaped wires make these scallops largely plug-resistant – significantly reducing maintenance costs. If plugging does occur, Delta scallops are incredibly easy to clean with a simple wire brush.

Whatever your application, Delta Screens can manufacture scallops to your precise specifications, including a wide range of materials and sizes. Speed installation and reduce maintenance costs with scallops from Delta Screens.

To capture contaminants and increase flow area into the bed.
