# SOLVING WATER TREATMENT PROBLEMS BEGIN WITH UNDERSTANDING.

What should you expect from a screen company? Simple. They need to understand your water treatment process. They have make high quality products built to precise specification. And they offer a complete product offering to fulfill your application needs.

## For Delta Screens it's check, check, check.

At Delta Screens, we know the water & wastewater treatment industry and understand the role our screening products play in the process. We have a thorough understanding of coarse solids removal, media retention and solids dewatering applications.

From OEMs and consulting engineers to treatment plant managers and operators, we've taken to heart their expectations on how screens need to function. We've found out timely delivery matters. We've become keenly aware that slot precision is critical to application success be it a water well, a surface water intake, a gravity filter underdrain, a pressure vessel screen internal, or a rotary sieve for solids dewatering. We've also come to realize that maintenance has to be minimal. We've taken all of this knowledge and applied it to our products and process, ensuring that a Delta screen is right for you.

## OUR QUALITY LEADS TO GREAT PERFORMANCE.

You don't have time to spend repairing, replacing or cleaning your screens. That's why you need screens that are built to exact specifications and can withstand the rigors of a particular application for a long, long time. When you choose Delta Screens, that exactly what you get.

Manufactured entirely in our state-of-the-art facility, a Delta Screens product is world-class and fully tested to meet or exceed your project requirements. We manufacture screens to your specification, or work with you to choose from a comprehensive line of standard configurations.

Our water/wastewater treatment products are available in 304 or 316L stainless steel with specialty treatments available if needed to meet the demands of particular applications.

To ensure the highest quality possible, we track manufacturing from the moment raw materials arrive to the second a screen is shipped. We do this as part of our total quality assurance and quality control program.

## YOU CAN'T MEASURE OUR KNOWLEDGE, BUT YOU CAN DEPEND ON IT.

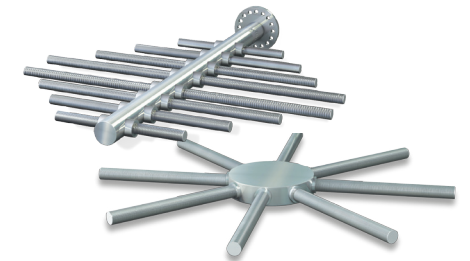

At Delta Screens, we're a seasoned team of veterans who've been around water and wastewater treatment for years. This firsthand experience has taught us much. We know what works and we can share our knowledge with you. Truth is, there can be multiple answers to any separation challenge; that's why we work closely with our clients to arrive at the best solution for any condition.

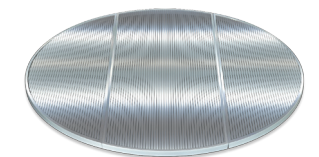

*Manufactured at the most modern facility in the industry,  
a Delta Screens product is built to ISO 2001 and API standards.*
